PROJECT ABSTRACT SUBMISSION

COURSE: ENGINEERING CAPSTONE PROJECT – 1(23IE4053R/23IE4053A)

A.Y. 2026 - 2027

TITLE OF THE PROJECT		
Sentiment Analysis on Product/Movie Reviews		
S. No.	University ID	Name
1	2420030093	E. Mahathi
2	2420030043	P. Pranathi
3	2420030773	V. Mani Maha Lakshmi
Name of the Guide		Prathusha

Abstract

In today's digital era, consumers frequently express their opinions about products and movies through online reviews, blogs, and social media platforms. These reviews contain valuable insights that can influence purchasing decisions and audience perceptions. However, the sheer volume of data makes manual analysis impractical. This project focuses on applying sentiment analysis techniques to automatically classify reviews as positive, negative, or neutral, and further identify underlying emotions. By leveraging Natural Language Processing (NLP) methods such as text preprocessing, tokenization, and feature extraction, combined with machine learning models like Naive Bayes, Support Vector Machines, and deep learning approaches, the system aims to provide accurate sentiment classification.

The project demonstrates how sentiment analysis can enhance product recommendation systems, improve movie rating predictions, and assist businesses in understanding customer satisfaction. Visualization techniques such as word clouds and sentiment distribution graphs are employed to present results in a user-friendly manner. Ultimately, this project highlights the importance of sentiment analysis in bridging the gap between raw textual data and actionable insights, enabling smarter decision-making in both commercial and entertainment domains.
